How did you find our office? _____

Your genes are not your destiny; your environment determines what genes are turned on and how they express. Your biography becomes your biology.

We are going to ask you a variety of questions that give us more information about your child's past and present experiences. These experiences affect your child's physiology and directly affect their physical, mental, emotional and spiritual wellbeing. These experiences fall into three categories; physical (trauma), mental/emotional/spiritual (thoughts) and chemical (toxins). If this experience was too much for your system to handle it locks down as a tonal shift (tension) which can lead to a variety of symptoms. Please fill the form out to the best of your ability. Your health survey is a key to the puzzle. No detail is too small.
